Wide Area Two-Way Radio Communications

I-LINK

Wide Area Two-Way Radio Communications

WHAT IS I-LINK?

I-Link is a digital trunked two-way radio system that enables high volume, wide area communication for your business needs. It is designed for organizations that need fast, flexible, clear communications over a broad range in difficult environments. I-Link is available with single market coverage or multi-market coverage and is scalable for your unique communication needs.

With I-Link, work teams can talk to one another or the main facility and also use data applications to work safely and more efficiently, including;

- Text Messaging
- Location Tracking
- Dispatch Capability

The Digital Difference

Two-way radio has been a successful analog communication solution for generations, and it proves itself every day in countless deployments around the world. In today's technologically advanced environment, a new platform is possible—a digital platform that breaks through to new levels of performance and productivity.

In the same way digital technology has transformed other media, it is now revolutionizing the way mobile professionals communicate. The time to take advantage of digital two-way radio technology is now!

The Alternative Solution

With I-Link, you now have a true two-way radio alternative! Nextel and Cellular are great options, but are they what your business truly needs?

I-Link is the first wide-area digital radio system with immediate radio connection to your business needs.

Contact us today to learn more about all of the flexible options I-Link provides so we can help you tailor the system to best meet your business needs.

I-LINK BENEFITS

Benefits of I-Link Include:

- Immediate two-way radio conversations
- One-to-many & one-to-one dispatch capabilities
- On-site & seamless roaming wide area coverage
- Clean, clear frequencies with no interference
- Talkgroup segmentation to organize work crews
- Data applications (opening gates, shutting off valves, etc.)
- No infrastructure investment
- No license or frequency search required
- Flexible and project-specific radio usage

INNOVATION YOU CAN COUNT ON

Reliability in even the toughest environments

Radios are built tough for the rugged demands of commercial activity.

Clearer, wider voice

The enhanced audio of MOTOTRBO minimizes static and noise so communication is clearer and delivers voice communication over a wider area than analog.

Extended work shifts

Users can keep radios in service longer between recharges. Battery life is 40% greater because the power needed for each digital transmission is half of what is required for analog.

More than voice

For those times when text communication is better or easier than verbal, end users can choose to upgrade their equipment to send and receive text messages using MOTOTRBO.

Locate assets with a glance

Add a location tracking application to the integrated MOTOTRBO GPS and make it simple to track both people and vehicles for greater efficiency and faster dispatch.

I-LINK DELIVERS MORE FOR YOU, MORE FOR YOUR BUSINESS

I-Link uses MOTOTRBO's™ Connect Plus Trunking System that delivers:

- Twice as many radios per repeater station.
- Faster, easier, clearer voice communication over a broader range in even difficult environments.
- The flexibility to expand communication beyond voice with text messaging or email.
- The capability of vehicle or personnel tracking by using integrated GPS with location tracking app.

Construction

On-site Communications, General Contractors, Asphalt/Paving, Builders, Grading/Earth Moving, etc.

Private Security

Building/Facility, Home Security, Retail Stores, etc.

Transportation

Taxi, Limo, Hotel Shuttles, Delivery Services, School Buses, etc.

Services

Plumbing/HVAC, Equipment Repair, Landscaping, Refuse Hauling, Towing, Snow Plowing, Farming, etc.

THE I-LINK SYSTEM

The Missing Piece to Your Business

Immediate two-way radio conversations
